

# StudyTeam RPI (Referral Partner Interface)

## What is RPI?

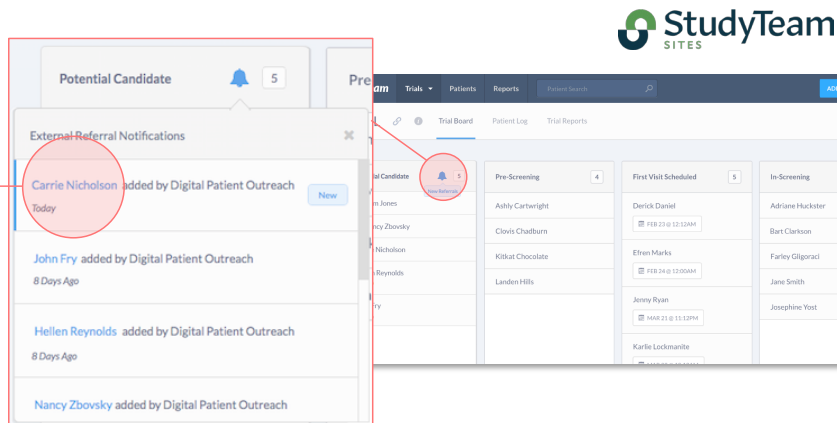

The Referral Partner Interface (RPI) is an API for the StudyTeam solution. RPI enables a sponsor’s recruitment partners or platforms to automatically route and import patient candidates they have identified directly into the appropriate site’s StudyTeam for Sites system. This minimizes “lost referrals,” reduces data entry burden for sites, and provides sponsors with earlier and more accurate performance reporting on their referral partners and platforms. For more on activating RPI, see the RPI Activation Process.

### Patient Identification

Digital Recruitment Platforms  
CRO Portals  
Sponsor Portals & Microsites

### Enrollment Performance Management

### StudyTeam RPI

StudyTeam **Referral Partner Interface (RPI)** is an API that automatically imports *patient referrals* from various recruitment platforms, directly into the **site’s** system

## Benefits for Sponsors

It is often difficult for sponsors’ clinical trial teams to know what happens to patients who are referred into their trials. StudyTeam RPI can help your team know, in real time, actionable information such as:

- Referrals that are waiting to be pre-screened at each site
- How many referrals each recruitment vendor has produced
- Which referral partners are generating quality referrals
- What percentage of enrollers are coming from each recruitment channel

### Benefits for Sites

Referrals sent to sites via email and other traditional methods can get lost. Sites have to transcribe patient information from emails or vendor portals into their patient tracking system. This creates more work for the site, data data entry errors, and potential for erroneous reporting of the source of the referral.

In contrast, StudyTeam RPI helps the sites, because it:

- Eliminates re-keying. RPI automatically imports referrals directly into the sites’ tracking system, StudyTeam™ for Sites, so all patient candidates are in one place
- Alerts site teams that new referrals require action
- Automatically imports pre-screening data captured by the recruitment platform
- Automatically attributes the referral to the the recruitment vendor that sent it

### Benefits for Recruitment Vendors

Recruitment vendors often suffer from payment issues caused by inefficient and vague reporting on referrals they generate. With StudyTeam RPI, the referral source is automatically assigned to the referral when it is sent to the site, and referral counts are available to sponsors and vendors in real-time. This can dramatically improve the accuracy and speed of payment for the vendors’ services.

### Which types of recruitment platforms can use RPI to integrate with StudyTeam?

- Traditional clinical trial recruitment vendors
- Digital / social recruitment vendors
- Sponsors’ recruitment portals
- Microsites developed for clinical trial recruitment
- Virtually any cloud-based platform that sources patients for clinical trials

The data you need to enroll trials with confidence...

...and to enroll trials *intelligently.*
