

StudyTeam for Sites™ Visit Window Calculator

As clinical research protocols become more complex, so do tracking and scheduling patient visits within the correct timeframes. Sites are left to calculate and build programs manually, which is extremely time consuming and prone to human error. Sites need an easier and automated solution for scheduling patient visits to streamline clinical trials.

The StudyTeam for Sites Visit Window Calculator quickly turns a protocol's schedule of activities into a calculator, allowing site staff to instantly determine the next ideal visit(s) for each patient in their trial, within the correct visit window. Reify's expert trial teams will customize each protocol, speeding up setup and reducing manual work.

With the Visit Window Calculator, you will be able to:

- Decrease protocol deviations and sponsor approvals to streamline clinical trials
- Save research coordinators valuable time by eliminating the need to create a homemade calculator or manually track by hand
- Reduce errors from complex protocols with an accurate and automated solution built directly into your sites' systems
- Schedule patients within the correct visit window faster than before, either over the phone or at the end of a visit

The Visit Window Calculator makes it simpler, faster, and more accurate for site staff to schedule patient visits within the correct time frame. By arming your sites with pre-built protocols, they can get back to focusing on what matters most: helping patients.
